

Multiport - 4 connectors in one port

For USB 3.0 | USB 2.0 | eSATAp | eSATA

The Multiport is a **multifunctional interface** that allows you to connect USB 3.0, USB 2.0, eSATA and eSATAp to the same port.

The required voltage of 5 V for eSATAp is supplied by USB port whereas the normal eSATA does not support power supply.

You may use the Multiport for **all peripherals that need 5 V** and for all common external devices that are connected to eSATA, such as card reader or external HDDs.

Devices for 12 V require an additional power source.
